EXP.NO:1	Comparative Study of Low-Code Development

Aim

To analyze the differences between **Low-Code Development and Traditional Software Development** in terms of development methodology, implementation time, maintenance, scalability, and suitability for developing a **Library Book Issue System.**

Comparison Table

Criteria	Low-Code Development	Traditional Development
Development Method	Visual application builder	Programming through source code
Coding Effort	Very little coding	Full-scale coding required
Time to Build	Faster implementation	Longer development cycle
Technical Skills	Suitable for beginners and developers	Requires experienced programmers
Cost	Lower development cost	Higher development cost

User Interface Design	Pre-built templates and components	Designed from scratch
Database Handling	Built-in database integration	Manual database design and coding
Workflow Automation	Easy workflow configuration	Custom workflow programming
Maintenance	Easier updates and changes	Requires developer intervention
Scalability	Best for small to medium applications	Suitable for enterprise-level systems
Example Tools	Zoho Creator, Microsoft Power Apps, AppSheet	Java, Python, ASP.NET, PHP

Development Workflow

Low-Code Development

Identify Requirements

Create Data Forms

Design Booking Screens

Configure Business Rules

Test the Application

Publish & Deploy

Traditional Development

Requirement Analysis

System Architecture Design

Frontend & Backend Coding

Database Development

Integration Testing

Bug Fixing

Deployment

Advantages of Low-Code Development

- Faster development
- Less coding required
- Easy maintenance
- Built-in database support

Advantages of Traditional Development

- Highly customizable
- Better for large applications
- Full coding control
- More scalable

Conclusion

Low-Code Development is ideal for building a **Library Book Issue System** quickly with minimal coding, while Traditional Development is better suited for complex and large-scale applications. For this project, **Zoho Creator** is the preferred platform due to its speed, simplicity, and built-in features.
