EXP.NO:4	Data Modelling and Form Design

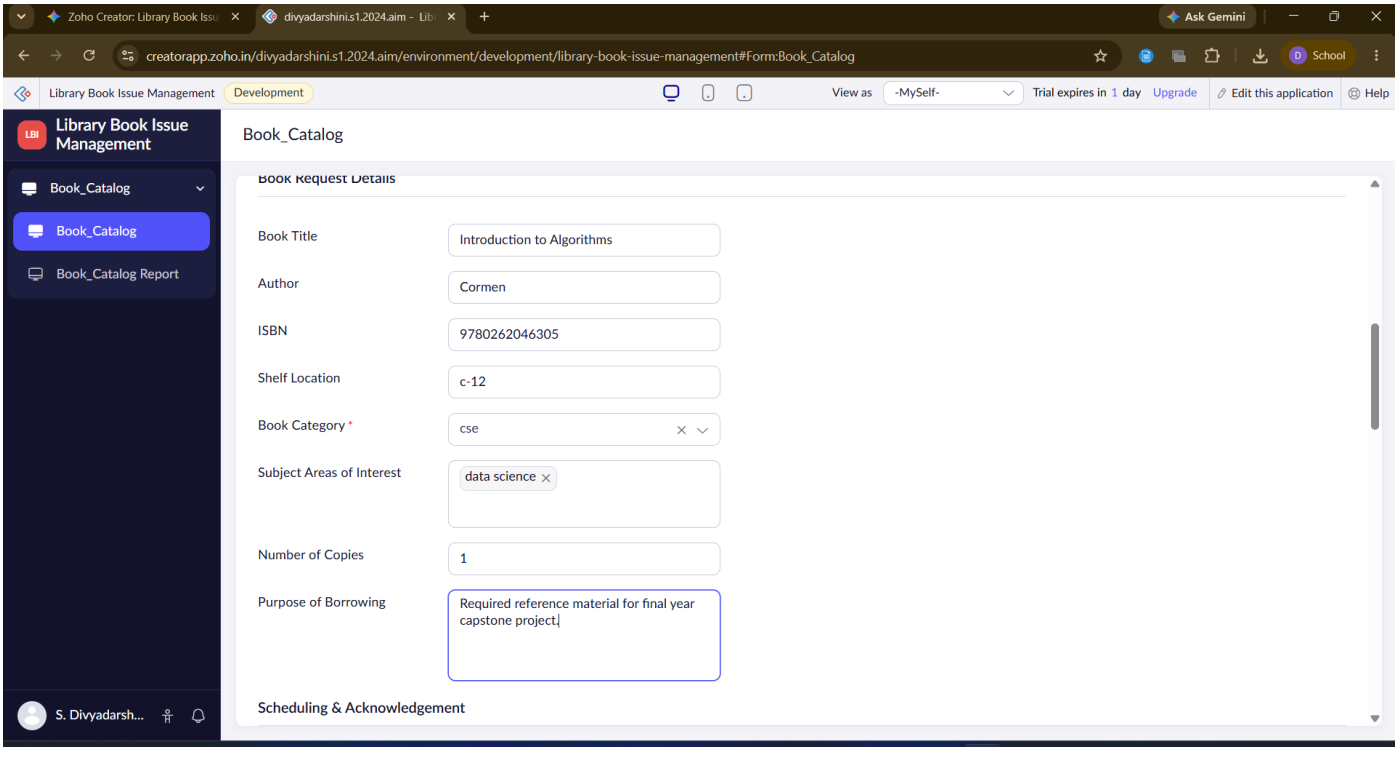

Aim

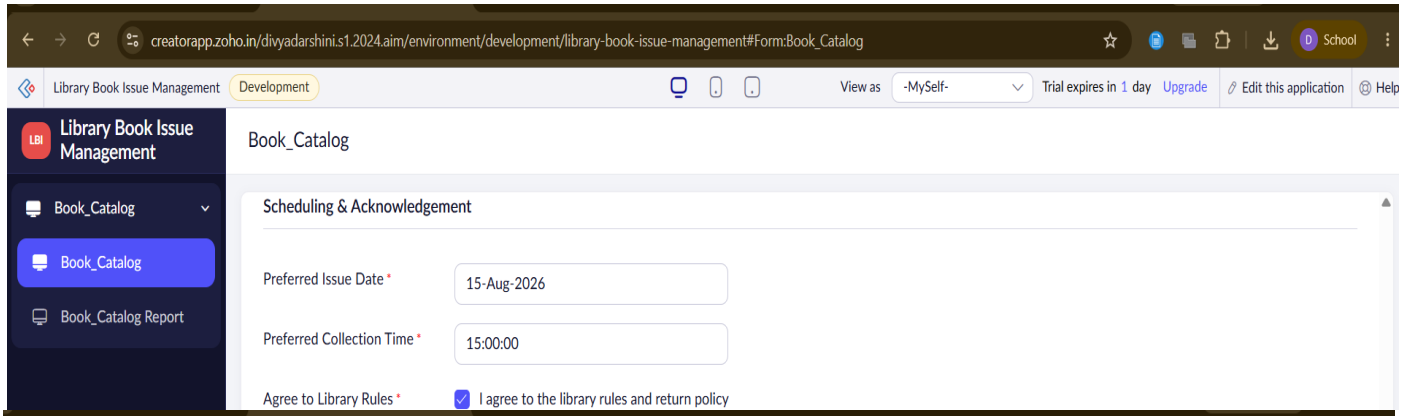

To design the data model and create forms for the Library Book Issue System using Zoho Creator.

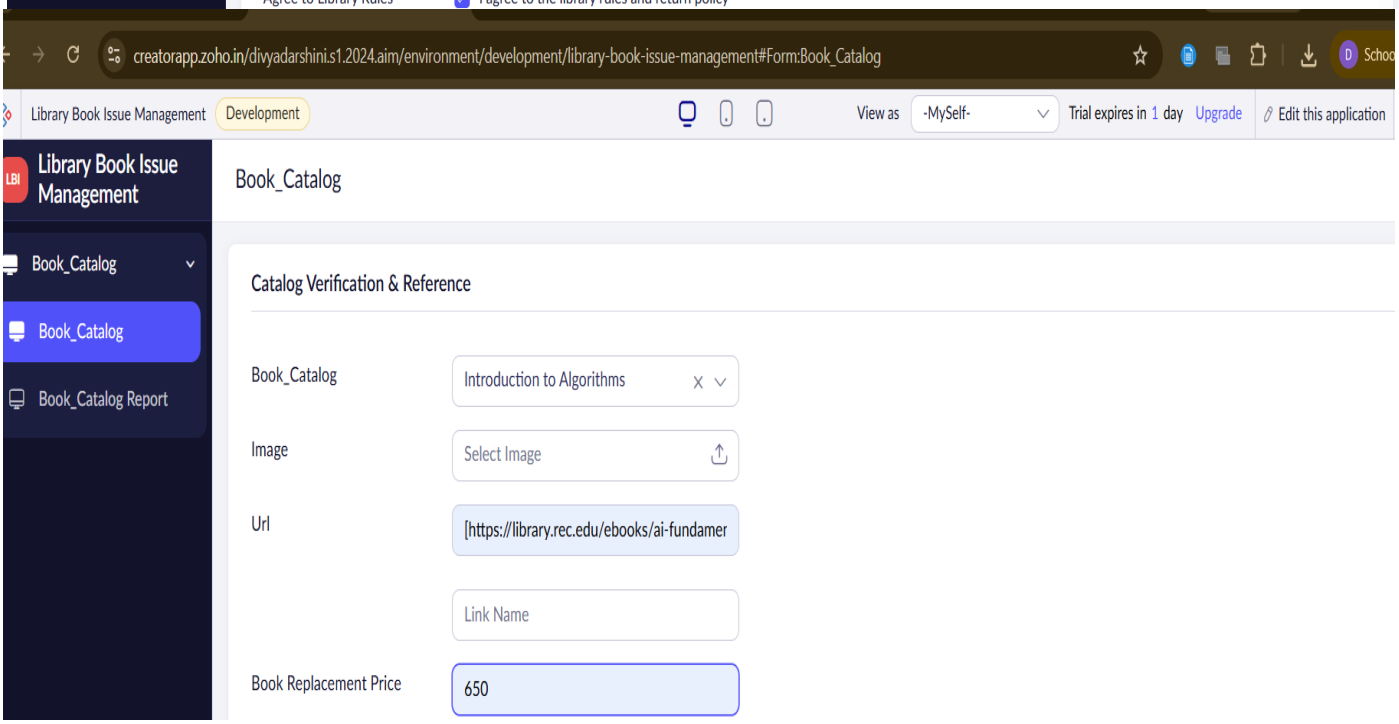

Procedure

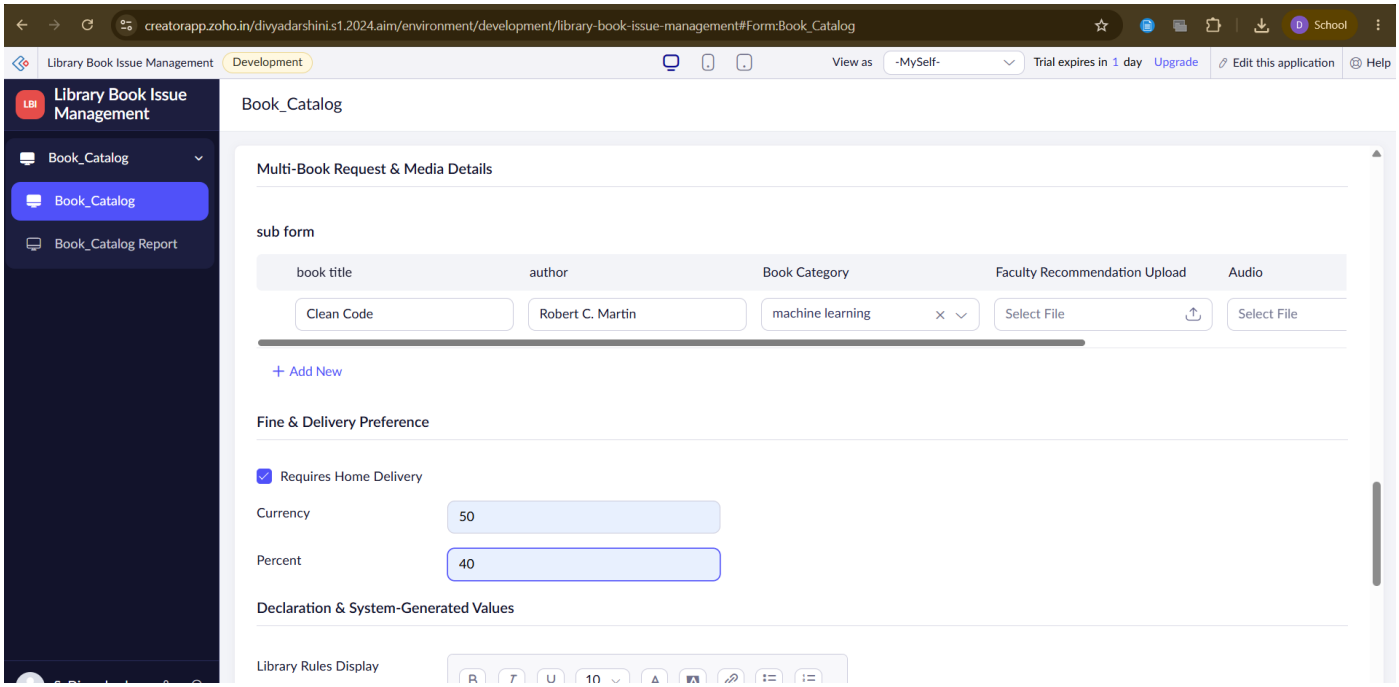

1. Logged in to the **Zoho Creator** account.
2. Opened the Library Book Issue application.
3. Created a **Book Catalog** form using the drag-and-drop form builder.
4. Added member fields such as **Member Name, Phone Number, Email, Address, Member Type, Member Type, Terms & Conditions**.
5. Saved the member form and verified that all fields were displayed correctly.
6. Created a **Book request section**.
7. Added book request fields such as **Book title, author, ISBN, Book category, subject area of interest ,number of copies.**
8. Saved the book request section.
9. Created a **schedule section** to manage book confirm schedule.
10. Added **Catalog verification and reference section** advanced field like image,url.,and book delivery section and also multi books can be purchased.
11. Configured the required field properties and validation rules.
12. Tested the forms by entering sample data.
13. Verified that the data was stored successfully and that the relationships between the forms worked correctly.
14. Saved the application and confirmed the successful creation of the data model.

Observation

The Book catalog form were created successfully using suitable field types. Lookup fields established relationships making data entry simple and organized.

Conclusion

The experiment demonstrated how Zoho Creator simplifies data modelling and form design using its visual interface. The Book Catalog were successfully connected, providing a well-organized structure for the Library Book Issue System.
