EXP 8: USER MANAGEMENT AND ROLE-BASED ACCESS CONTROL IN ZOHO CREATOR

AIM

To implement user management and role-based access control in the Library Book Issue Management application by creating roles and permissions for Librarian and Student and assigning them to a test user.

PROCEDURE

1. Open the application, click **Edit this application** and go to **Settings**.
2. Under Permissions, open **User Permissions**.
3. In the **Permissions** tab, create two permission sets: **Librarian** (admin profile) and **Student** (read-only access to view the book catalog and request book issues).
4. Set the module permissions (Access, View, Edit, Delete) for each form, report and page.
5. In the **Roles** tab, create the roles **Librarian** and **Student**; set Student to report to Librarian with Share Data with Peers as No.
6. Invite a test user by email and assign the application role and permission to the user.
7. The test user receives the invitation email and clicks **Confirm Account** to join the application.

OUTPUT SCREENSHOTS

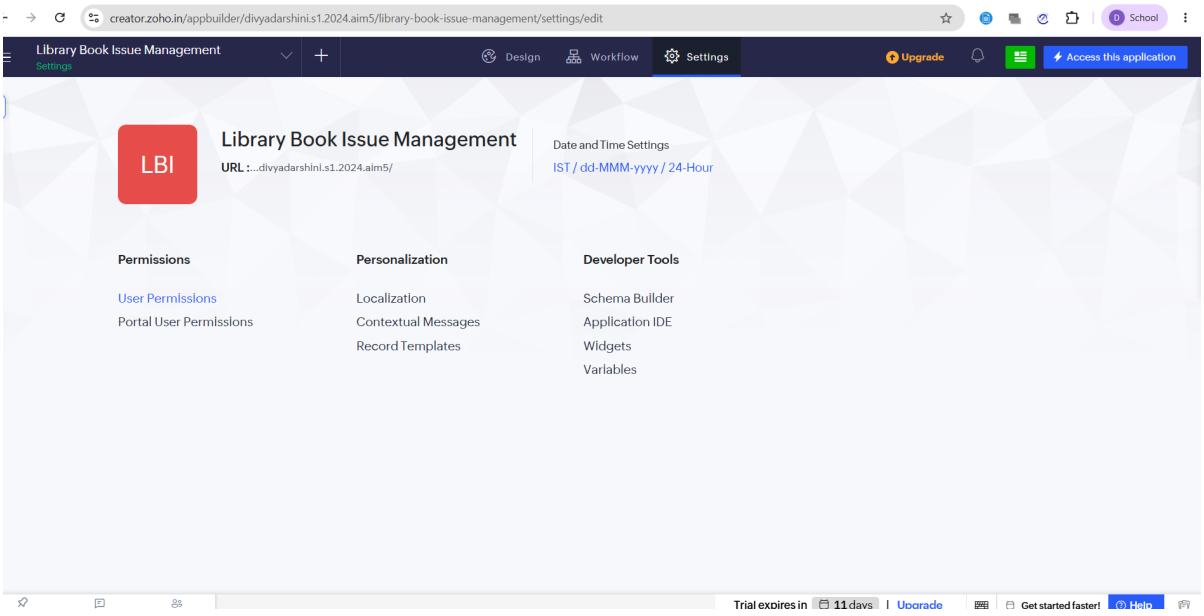

Fig 8.1: Application Settings page - Permissions section (User Permissions)

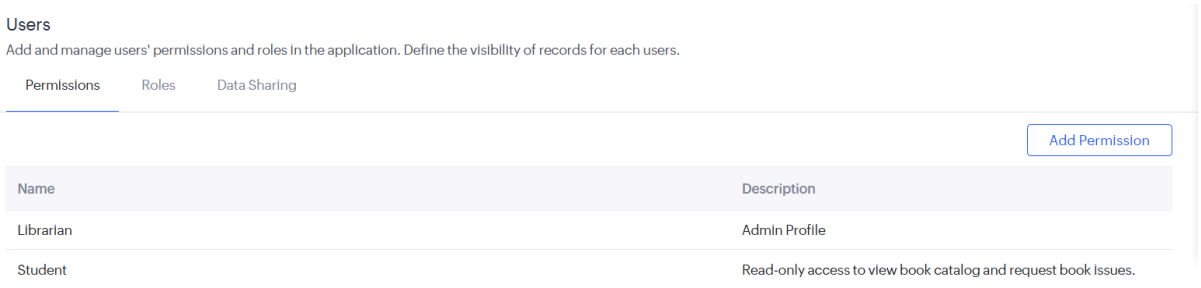

Fig 8.2: Permissions tab - Librarian and Student permission sets created

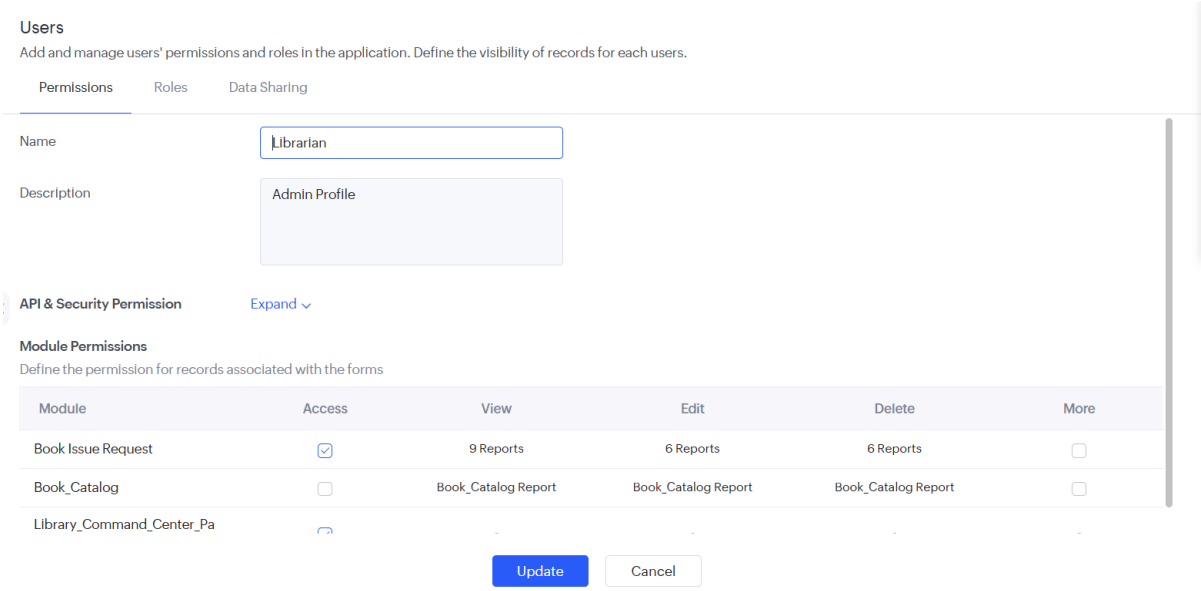

Fig 8.3: Librarian permission - module access, view, edit and delete settings

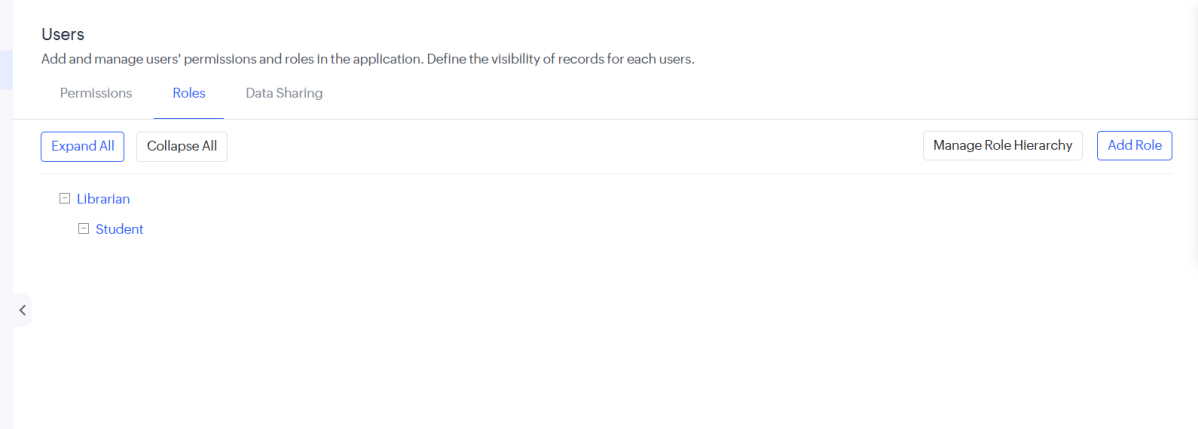

Fig 8.4: Roles tab - role hierarchy (Librarian and Student)

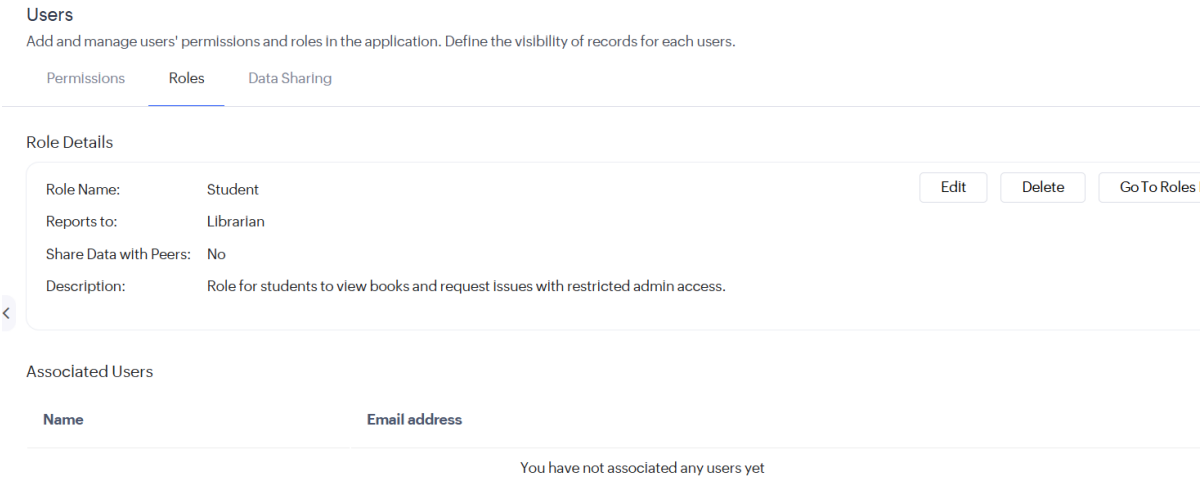

Fig 8.5: Student role details - reports to Librarian, share data with peers: No

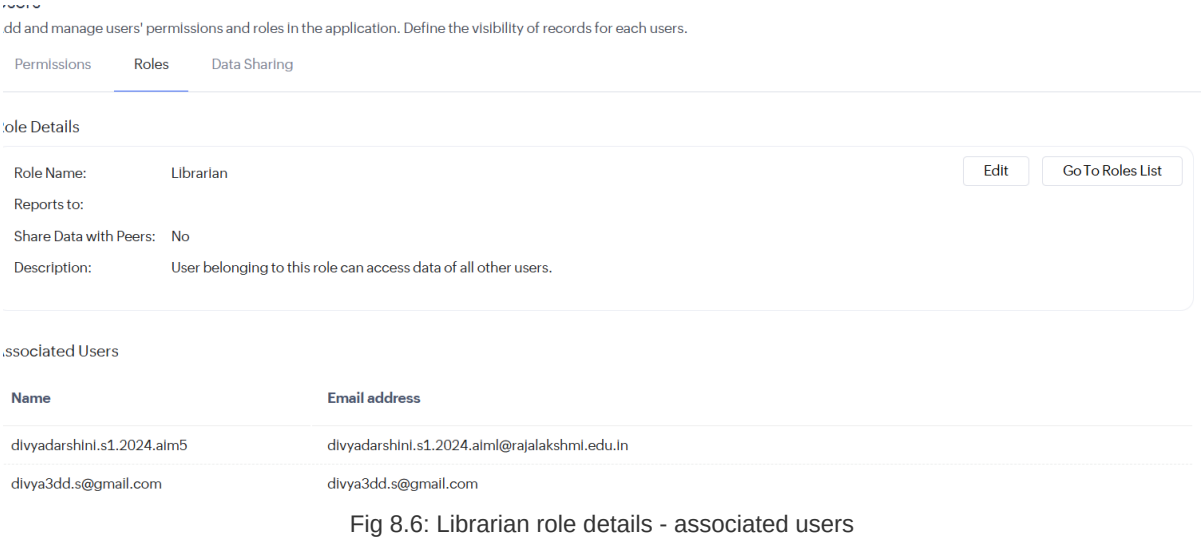

Fig 8.6: Librarian role details - associated users

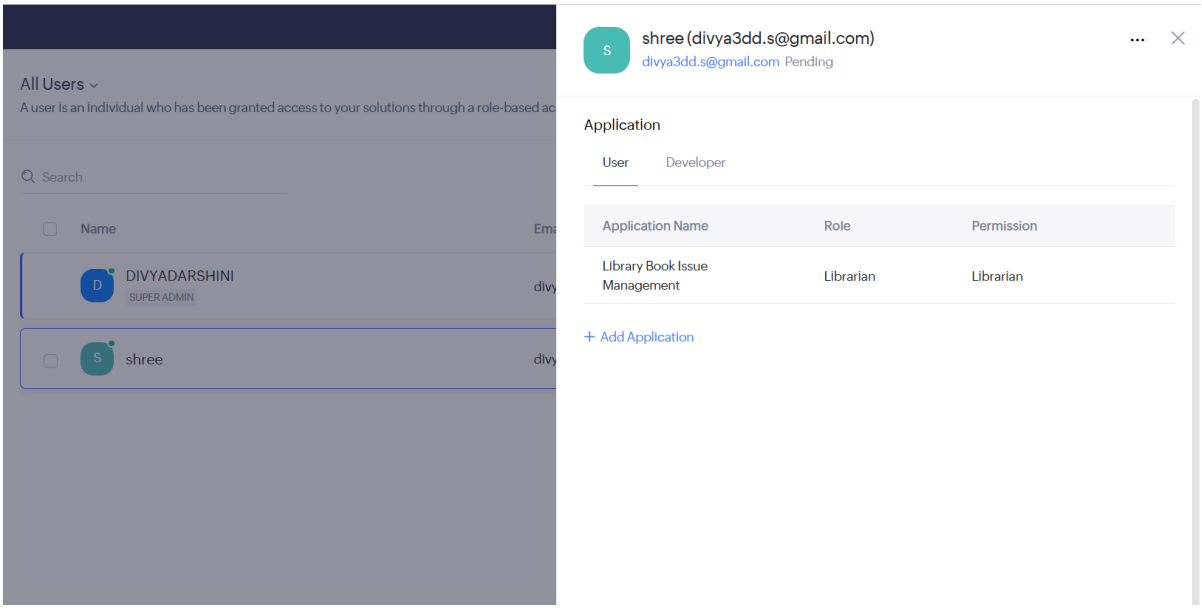

Fig 8.7: Test user added to the application with role and permission assigned

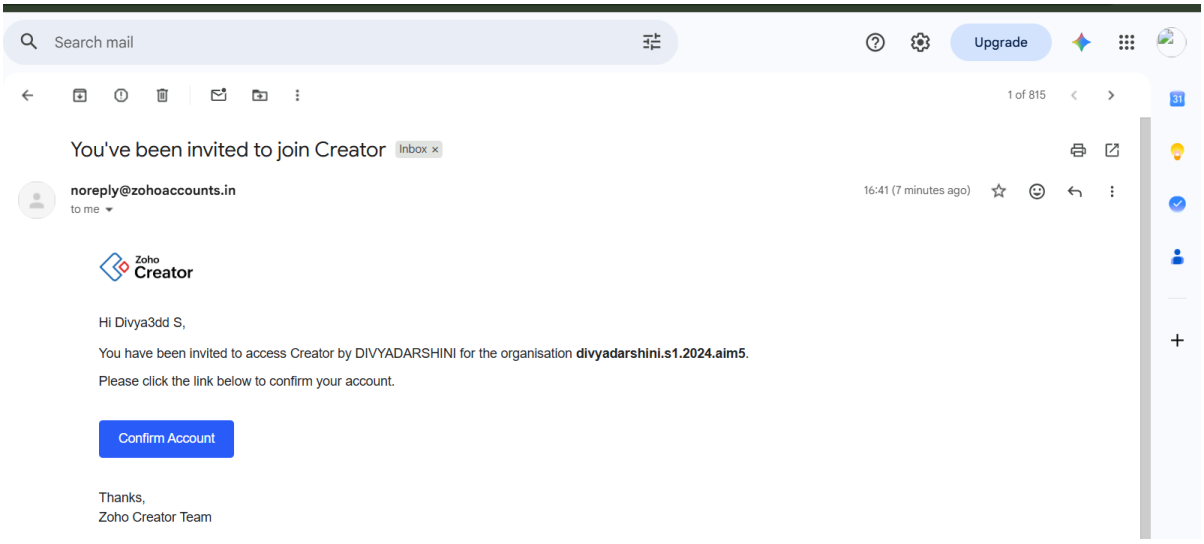

Fig 8.8: Output - Zoho Creator invitation email received by the test user

RESULT

User management and role-based access control were successfully implemented. Librarian and Student roles and permissions were created, a test user was invited and assigned a role and permission, and the invitation email was received.
