EXPERIMENT 4: DATA MODELLING & FORM DESIGN

AIM:

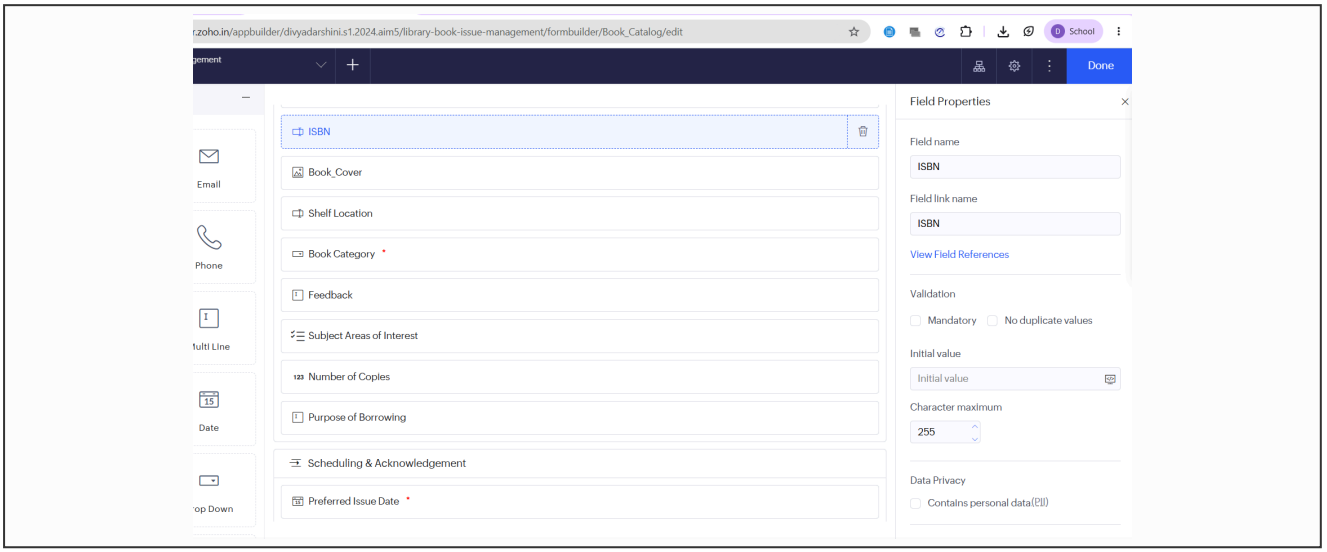

To design and configure structured data models and multi-section forms within Zoho Creator for managing entity details, member profiles, and relational catalog entries.

PROCEDURE:

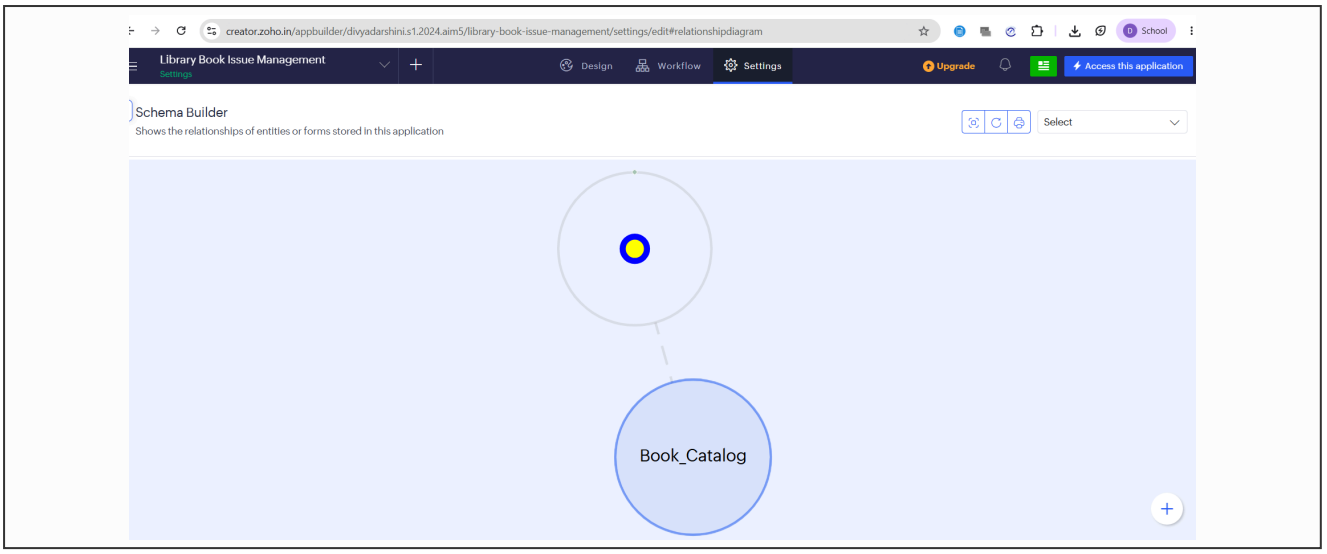

Step 1: Access Zoho Creator Form Builder and create the `Book_Catalog` form. Structure logical field sections including Member Details, Contact Details, and Book Request Details.

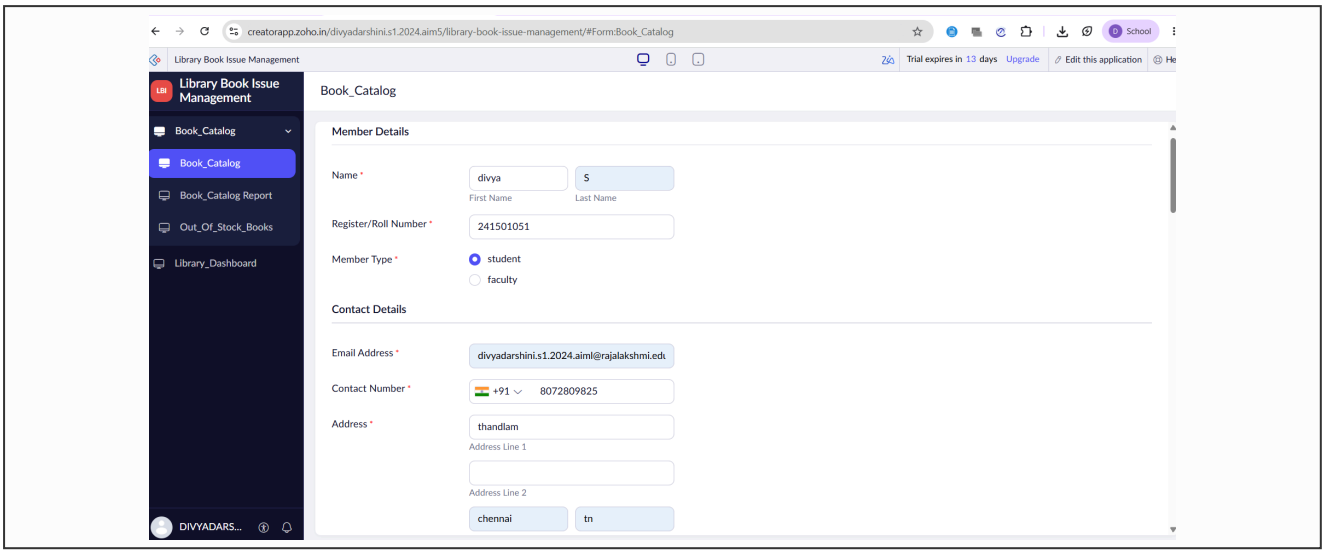

Step 2: Configure field properties and data constraints for fields like `ISBN`, `Number of Copies`, `Book Category`, and `Preferred Issue Date` in Form Builder.

Step 3: Access Schema Builder in Application Settings to verify entity relationships and linkage diagrams between catalog and issue management forms.

Step 4: Access the live application interface and launch the `Book_Catalog` form to test data entry, field validations, and record population.

RESULT:

The relational data model and form structures for the Library Management System were successfully built, configured, and validated using Zoho Creator.
