EXPERIMENT 6: WORKFLOW AUTOMATION USING DELUGE

Library Book Issue Management System — Low-Code Application Development

AIM

To design, configure, and implement automated workflows and Deluge scripts in the Library Book Issue Management System in Zoho Creator to handle business logic such as auto-calculating collection/due dates and sending automated email confirmations upon form submission.

PROCEDURE

1. Access the **Workflows** section in Zoho Creator and navigate to Form Workflows for the Library Book Issue Management System.
2. Define the workflow trigger condition to execute on *Created or Edited* and *Successful Form Submission* for the relevant form.

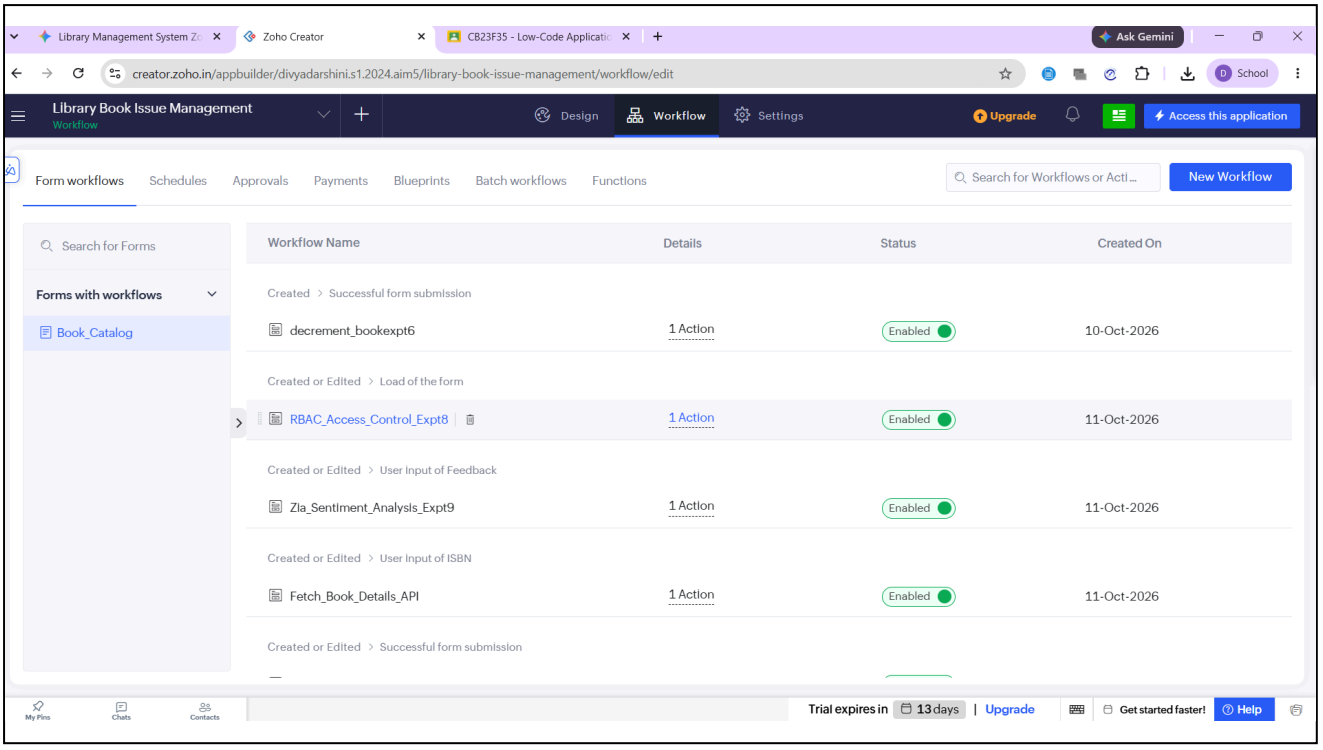

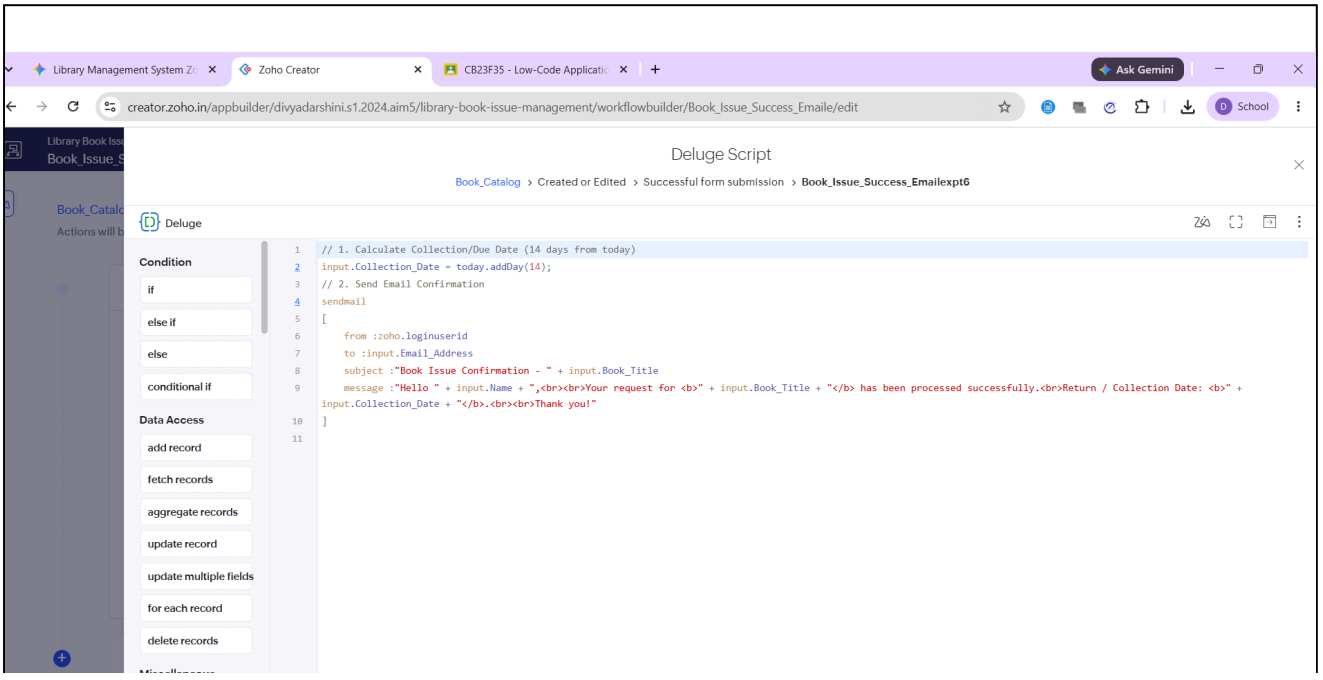

Figure 6.1: Workflow Management Dashboard showing configured rules and form triggers.

3. Save and associate the Deluge script action within the workflow execution pipeline for form submission.

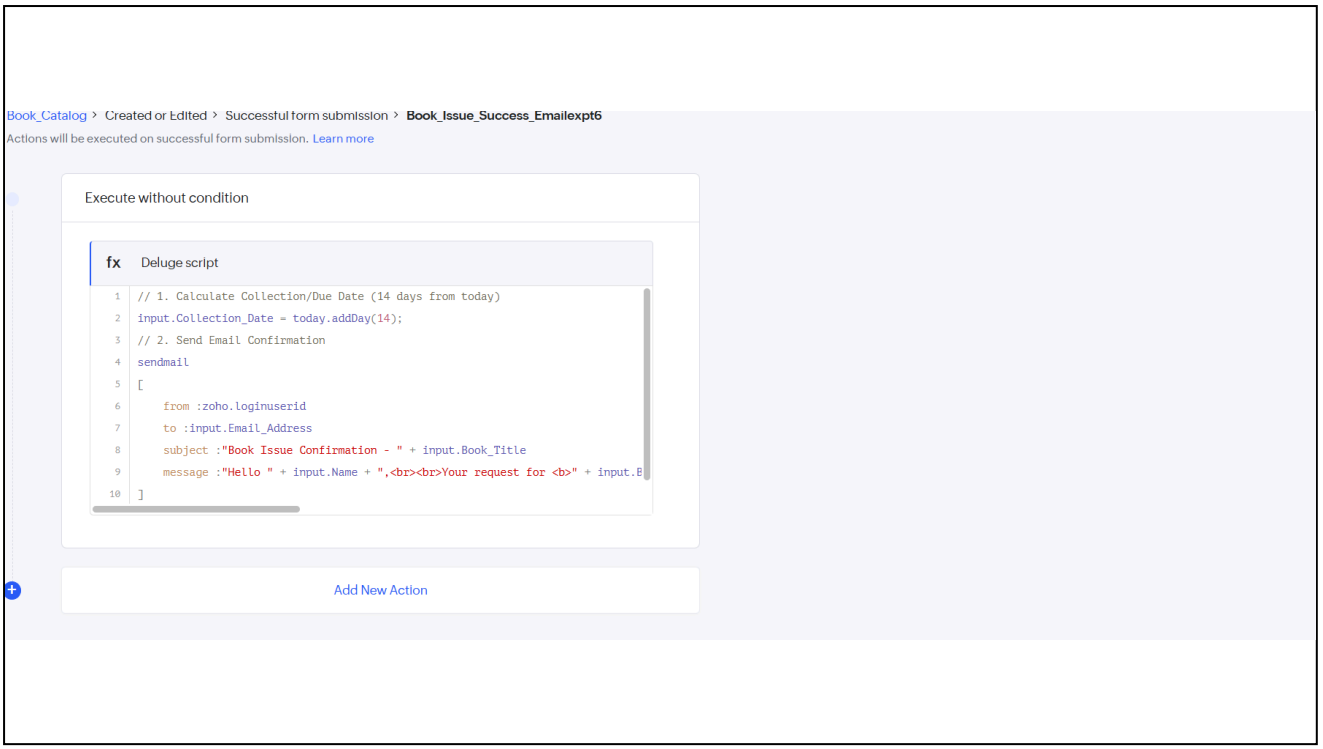

Figure 6.3: Workflow Action Builder displaying configured Deluge script action.

4. Access the live application, submit a new entry through the form, and verify that the automated workflow executes successfully by checking the received email notification.

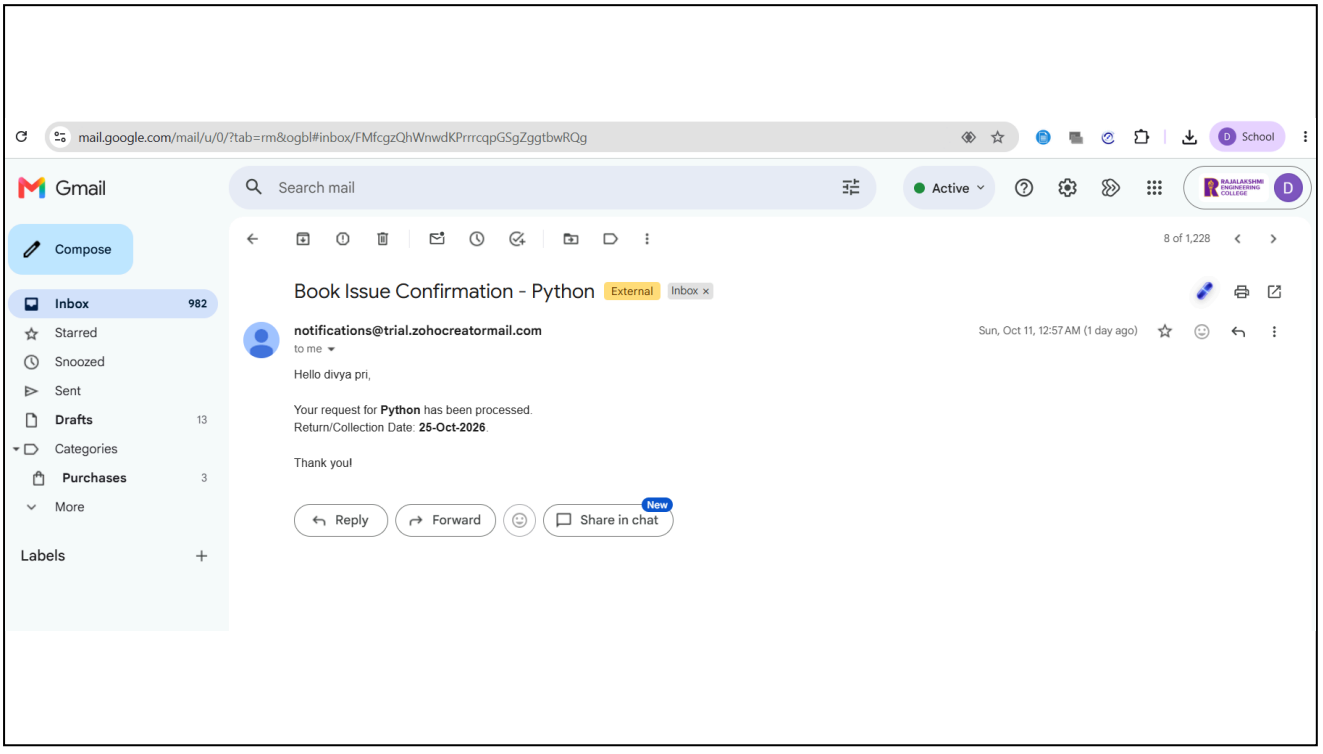

Figure 6.4: Automated Email Confirmation received in Gmail.

RESULT

The workflow automations using Deluge scripting were successfully configured and verified in the Library Management System. The system automatically calculates return dates, updates records, and dispatches confirmation emails upon form submission.
