EXPERIMENT 8: USER MANAGEMENT AND ROLE-BASED ACCESS CONTROL (RBAC)

AIM

To implement and verify Role-Based Access Control (RBAC) in Zoho Creator by creating custom user roles, defining specific permission sets, assigning users to designated roles, and confirming restricted view-only access in the live application UI.

PROCEDURE

1. Navigate to Application Settings in Zoho Creator and select **User Permissions** under Users and Control.
2. In the **Roles** tab, create a new role named `Student` with `Reports To: Admin`.
3. In the **Permissions** tab, create a new permission set named `Student_Permissions`. Configure the `Book_Catalog` component with **View** access only (uncheck Access, Edit, and Delete). Enable View/Access for `Library_Dashboard`.
4. Go to global account Settings under **Users** and assign the target user account to the `Student` role and `Student_Permissions` set.
5. Open the live application via **Access this application** and verify that the `Book_Catalog_Report` restricts creation, editing, and deletion privileges for the assigned user.

STEP 1: ROLE CREATION

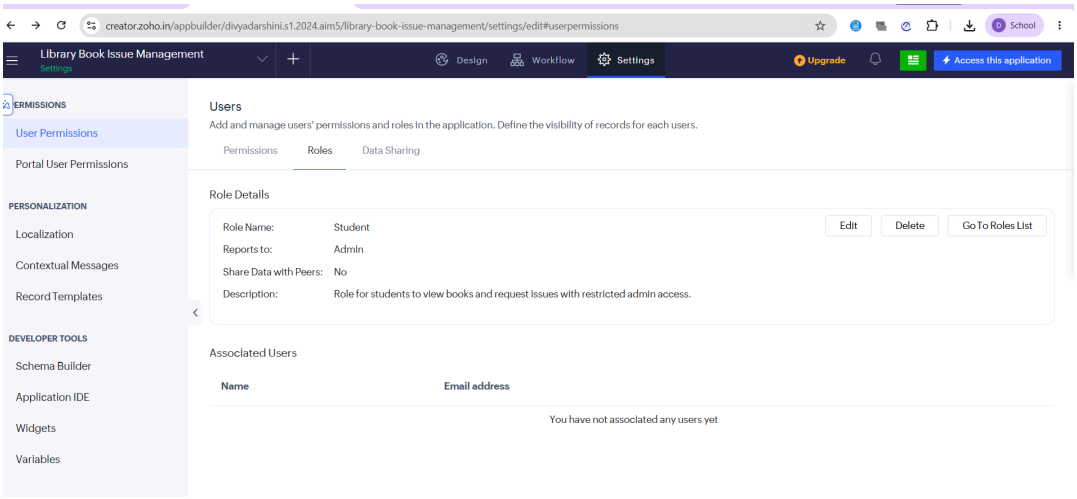

Figure 8.1: Role Setup (Student Role Reporting to Admin)

STEP 2: PERMISSION SET CONFIGURATION

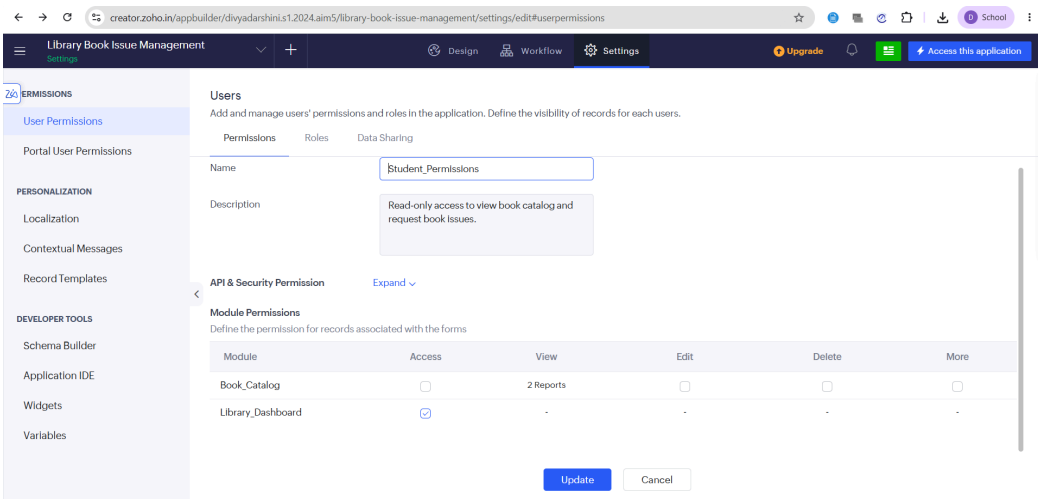

Figure 8.2: Permission Set Configuration (Student_Permissions View-Only Settings)

STEP 3: USER ROLE ASSIGNMENT

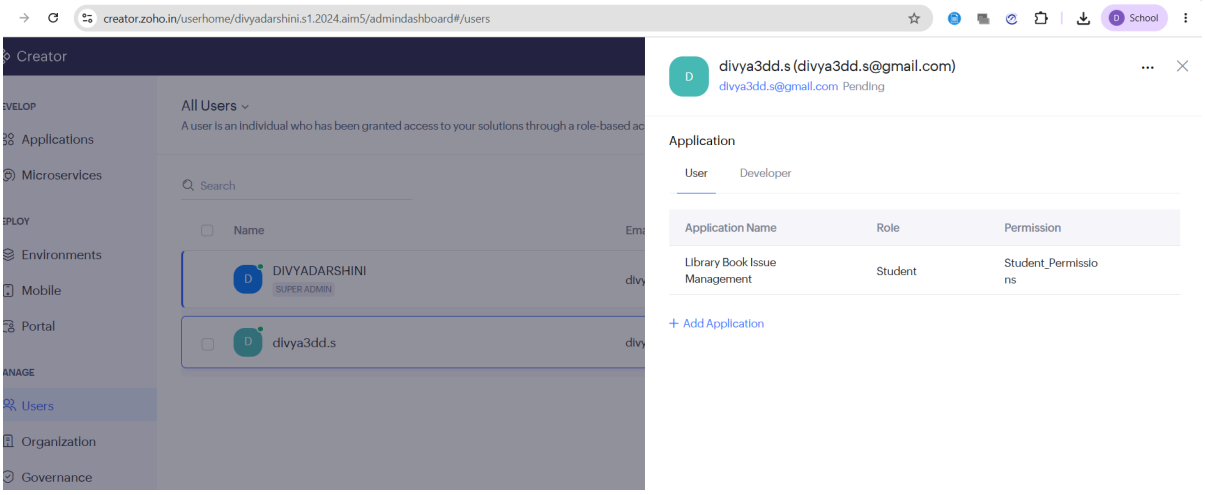

Figure 8.3: User Assignment (Student Role & Permission Set Assigned)

STEP 4: LIVE ACCESS RESTRICTION VERIFICATION

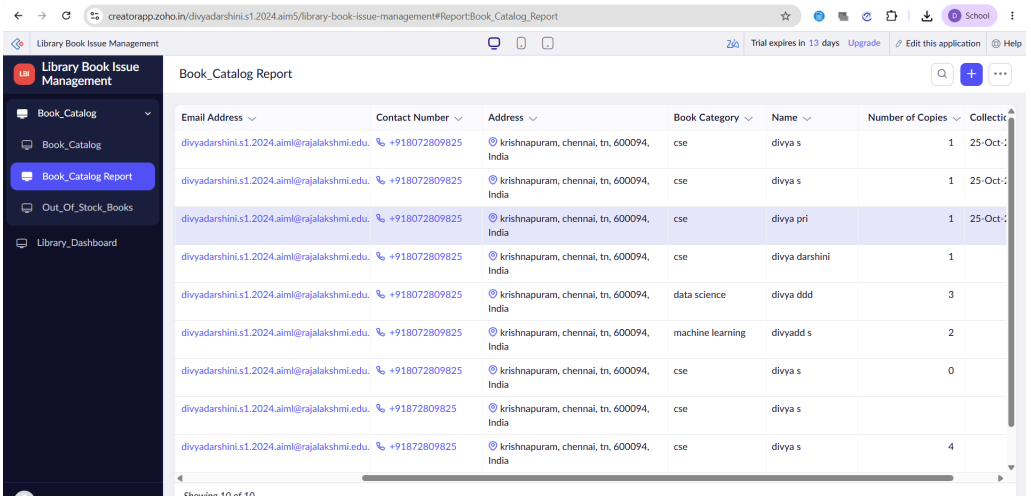

Figure 8.4: Live Application View (Read-Only Access Enforced for Book_Catalog_Report)

RESULT / CONCLUSION

The Role-Based Access Control (RBAC) mechanism was successfully configured and verified in Zoho Creator. The `Student` role restricted record creation, editing, and deletion while allowing view access to catalog reports.
